## PLC-9042

### HOSE CLAMP PLIERS

- Special pyramid-shaped tooth design efficiently grips hose clamps without slipping. This special shape also enhances the strength in gripping, helping remove melted rubber hoses near the engine.

- Large jaws are designed to be in round form. This can help work from different angles, suitable for working in confined spaces.

- The jaws are designed to be slightly tapered when closed. This special design can guarantee the jaws are on straight lines when opened at the width (about 20 mm) that is suitable to work on most hose clamps.

- Long and slim pliers (331 mm / 13 in) can reach deep spaces in engine compartment easily.
